POSSE® ABC

MOBILE

AT A GLANCE

Mobile Access to Critical Data
POSSE Mobile provides field workers with access to critical data, allowing them to work efficiently while away from the office. POSSE Mobile seamlessly manages background network connections while the inspector works in the field. Your inspectors can continue working while network connectivity is lost, assured that POSSE Mobile is capturing and storing all their information and connecting with the main database whenever wireless connectivity is available. Inspections results are instantly available to other internal staff users.

Work Efficiently from the Field
Inspectors can complete assigned inspections and schedule follow-up inspections immediately in the field. Your inspectors can also email inspection receipts and print from their devices. If connected to the Internet, inspectors can use embedded links to search the main POSSE database.

Integrated voice recognition allows inspectors to verbally record inspection notes with automatic transcription. Efficient pre-configured tabs within the application can provide an inspector – regardless of discipline – with agency-specific, point-and-touch checklists, related job details (including relevant license documents, important conditions, and warnings), and the ability to capture and add photos.

### Leverage the Power of Your Device
POSSE Mobile's responsive design works on popular smartphone and tablet platforms (iOS, Android) using your native smartphone functions such as camera and maps (for route optimization and "street view" imaging) when required.

Easily Manage POSSE Mobile
The POSSE Mobile application is administered from the centralized point-and-click POSSE Administration subsystem, allowing easy changes to add/modify inspection types, default assignments, and inspection checklists.

- ✓ Access via your smartphone, tablet or any browser-based mobile device

- ✓ Organize inspection tasks efficiently with synced To Do Lists (by date and by distance)

- ✓ Use Quick Search Functionality to find important information in the POSSE database

- ✓ View detailed task checklists including completion statuses

- ✓ Attach photos in the field

- ✓ Dictate results in the mobile app using convenient speech-to-text

- ✓ Annotate violations easily with pertinent code section references

- ✓ Access on demand license details including supportive documents

- ✓ Complete tasks quickly, easily, and error free, with the intuitive 'drill down' workflow

Intuitive 'drill down' workflow

Synced To Do List (by date and distance) for inspections

Quick search functionality

Annotate violation record with pertinent code section

Computronix understands that critical workflow processes happen in the field, so mobile users must have portable, real-time data to provide effective and efficient customer service. Built using the latest Microsoft Xamarin technology to support native applications on iOS and Android touch based platforms, our contemporary POSSE Mobile technologies provide field workers with fast, efficient in-the-field mobile computing based on their specific business needs.
