

AD-HOC REPORTING

AT A GLANCE

Any Data, Anywhere

Data is the foundation of every AI-driven insight. By connecting all your POSSE data in a single platform, no matter its format, size, or location in the ecosystem, ThoughtSpot becomes a single source of truth that eliminates data silos, ensuring that every decision is based on the most complete and accurate picture of your business.

AI Agents

Unlike other AI solutions, ThoughtSpot uses advanced semantic models and human-in-the-loop feedback to master your business language, delivering precise, contextual insights you can trust. ThoughtSpot learns quickly through an intuitive coaching interface that allows analysts to easily monitor and manage feedback, ensuring its answers become more accurate over time.

Embedded Analytics

Ditch static reports and empower every user with true self-service through conversational AI, natural language search, and infinite drill-downs—no data team required. Equip staff to explore freely without predefined paths and instantly surface hidden insights with SpotIQ's automated detection of outliers, trends, and correlations.

AI-Augmented Dashboards

Liveboards provide a real-time, interactive view of your data, keeping you updated on business metrics as they evolve. Easily drill down from high-level analytics to the most granular insights without the need for pre-defining drill paths.

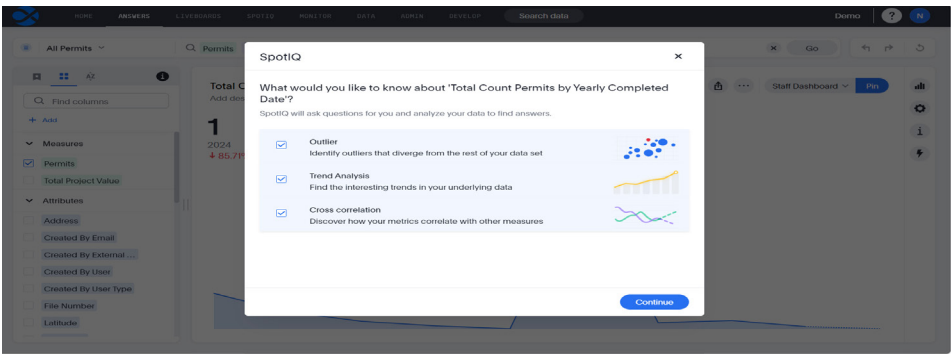

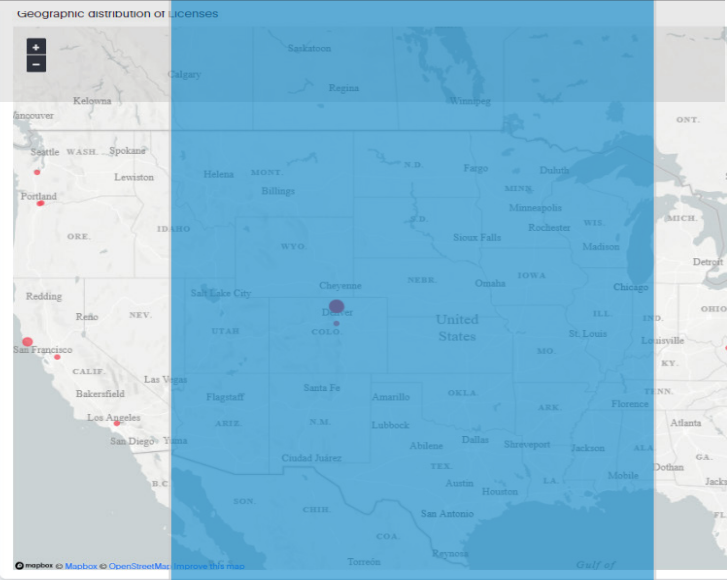

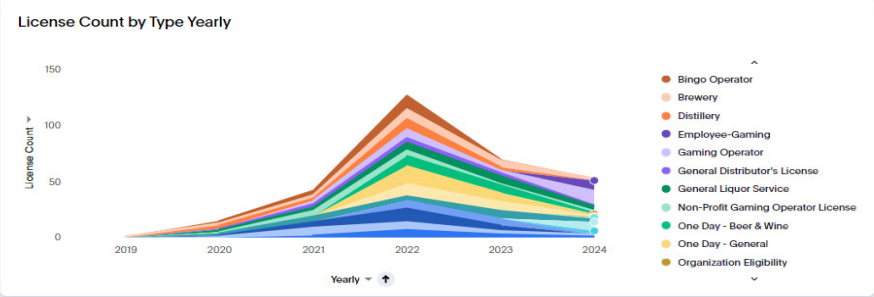

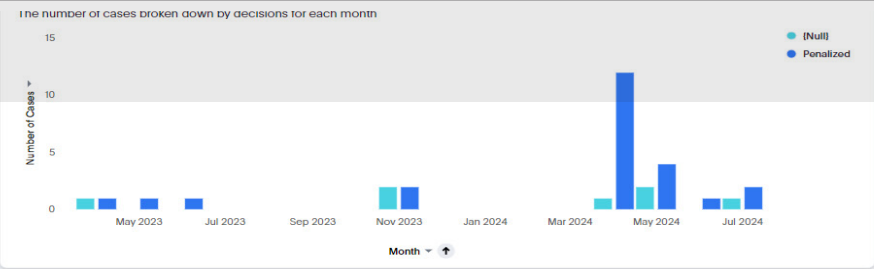

Actionable Insights

Build custom action menus for individual data points or entire visualizations, enabling users to act directly on the data they see. Whether it's creating a CRM entry, sending a promotional email, or feeding data into your forecasting model, POSSE Ad-Hoc Reporting makes it easy to go from insight to action.

Embed AI into your core workflows

Seamlessly integrate trusted, accurate AI insights into your existing workflows and applications. Embed ThoughtSpot directly into the business applications your users depend on every day. Automatically push contextual data and generate data-driven discussions in Slack or Microsoft Teams.

- ✓ “Powered by POSSE” data in tandem with ThoughtSpot™. AI exploration and insight discovery as easy as talking to a chatbot.
- ✓ 100% browser-based, point-and-click report design environment lets your staff access reports easily
- ✓ Run reports on desktops and mobile devices, and see your reports at any time, from anywhere
- ✓ Create clean, attractive 3D charts, flexible grids, and visual groupings to easily see your data
- ✓ Easily form data into tables, reports, charts, pivots, and gauges
- ✓ Flexible and dynamic smart filters -- streamline your reports and make them work for you
- ✓ Interactive linking and drill-down supported, so you can dive into your data
- ✓ Share reports through email
- ✓ Enterprise license (unlimited internal users, unlimited reports)

“Computronix delivered a system that met our needs and continues to offer support as the system matures and grows. The consultants are highly professional and client-oriented. I value the company’s integrity.”

Real Estate Division
City of Dallas, TX*

Transparent Enterprise AI

Your AI shouldn’t be a black box. POSSE Ad-Hoc enables users to provide feedback, edit, and modify their answers based on business knowledge, and allow analysts to effortlessly govern feedback. Data teams can maintain full control over how AI applies its learnings to enhance end-user experiences, empowering analysts to govern and improve the system effectively.

ThoughtSpot’s patented, relational search technology enables anyone to ask a question in a search bar and get an answer back, just like your favorite search engine. Search Data lets anyone create new insights, while Search Answers returns the best insights from previously-created content. This relational search technology also enables you to fine-tune your AI-generated answers with 100% accuracy - no technical expertise required.
