

INSPECTION MANAGER

AT A GLANCE

The **POSSE Inspection Manager** equips government agencies to more effectively and efficiently manage inspector resources across diverse business areas. Seamlessly integrated with our 'Powered by POSSE' solutions for permitting, inspections, investigations, and code enforcement, POSSE Inspection Manager helps users:

- Assign, schedule, and monitor inspections
- Assess and optimize inspection(s) progress
- View and streamline inspector routes

From this convenient, mobile-friendly tool, Inspection Manager displays:

- Details of each inspection
- Inspections filtered by type (e.g. electrical or plumbing inspections)
- Inspections yet to be assigned
- Current inspection status
- Routes planned for each inspector/assignee

POSSE Inspection Manager visualizes inspections to be completed as both:

- A list of inspections with details
- A set of location-based points on a map

The key functions of Inspection Manager include **scheduling, assignment** and **routing**.

Scheduling

Inspection Manager provides an intuitive, easy-to-use interface for scheduling inspections either individually or in groups, from a visual map or inspection list view.

Schedules can estimate how long it might take for a specific assignee and inspection. Several factors may affect how a long an inspection is estimated to take, including:

- Permit, property and inspection type
- Violations or deficiencies discovered during previous inspections
- Inspector capabilities (incl. contractors)
- Communication preferences

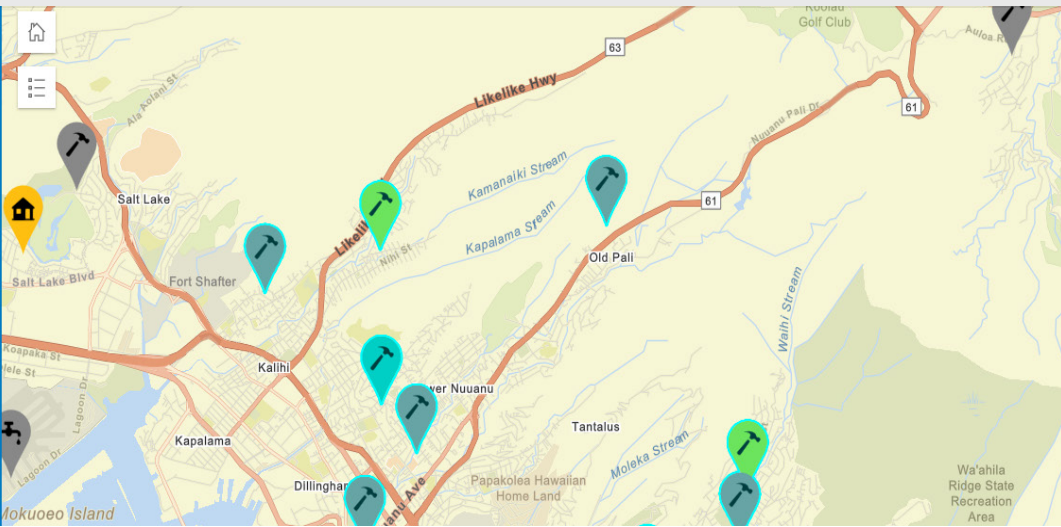

Assignment

Inspection Manager supports the assignment and reassignment of inspections based on restrictive type (e.g. Permit Type, License Type, Region, etc.) and/or business area.

Location Features:

- POSSE Mobile configuration to enable monitoring of inspectors' locations for safety.
- Allows resource redistribution for high priority inspections based on proximity
- Enables prompt response to customer queries on expected inspector arrival time

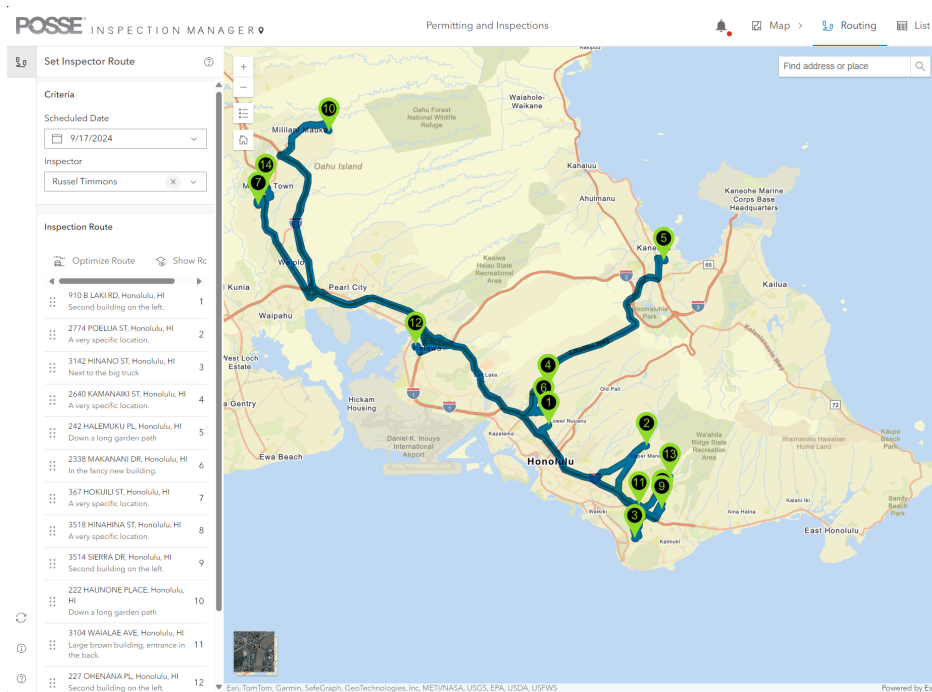

- ✓ Map Mode
 - Selection Inspections Panel
 - Inspections Pop-Up
- ✓ Map/Location based assignment
- ✓ Optimized route planning
- ✓ List View with inspection details
- ✓ Filter results by date, permit type, inspector name, status, and more
- ✓ View inspections by discipline, inspections completed & location
- ✓ Assignment by business area, permit type and region/location
- ✓ Automated error notification
- ✓ POSSE Mobile compatibility
- ✓ Fully integrated inspection system
- ✓ Improved resource allocation

Routing

Inspection Manager enables supervisors to easily designate the ideal inspection routes based on route optimization guidance provided via the map view. A handy 'Optimize Route' button quickly generates the most expeditious route for inspections not yet prioritized.
